

2010 SIRE SUMMARY

SPRING EDITION

TABLE OF CONTENTS

Percentile Charts	39
Purebred Simmental Growth, Maternal, and Carcass Traits	41
Simbrah Growth, Maternal, and Carcass Traits	76
Hybrid Simmental Growth, Maternal, and Carcass Traits	78
Fullblood Simmental Growth, Maternal, and Carcass Traits	84

Quick Guide to ASA EPDs and \$ Indexes

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing in what units they are expressed. For example, if the above case referred to weaning weight EPDs, sire A would be expected to sire 15 pounds more weaning weight than sire B. If calving ease was the trait, sire A would be expected to sire 15 percent more unassisted births in first-calf heifers; in other words, if sire B sired 30 assists in a group of 100 heifers, we would expect sire A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For more detailed information about EPDs and \$ indexes, visit www.simmental.org. Listed below are the units in which ASA EPDs are expressed:

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (See \$ Indexes for more details.)

Back Fat (BF): Inches of carcass backfat at 475 days.

Birth Weight (BW): Pounds of birth weight.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight at 475 days.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Marbling (MRB): Carcass marbling score at 475 days.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Ribeye Area (REA): Square inches of carcass ribeye at 475 days.

Stayability (STAY): Percent of daughters remaining in the cowherd at six years of age.

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario. (See TI for more details.)

Warner-Bratzler Shear Force (WBSF): Pounds of force required to shear a rib-eye steak.

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Yield Grade (YG): Carcass yield grade score at 475 days.

\$ Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide pieces of the economic puzzle. This is where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on integrated commercial production. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sires for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you are keeping replacements use API, if not, use TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years ($\$50 \text{ diff.} \times 30 \text{ hd.} \times 4 \text{ yr.} = \$6,000$). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For more detailed information about EPDs and \$ indexes, visit

www.simmental.org.

Important disclaimer: DO NOT compare index values of purebreds of different breeds, hybrids of different breed composition or purebreds with hybrids — our system was not developed to make valid comparison among these groups. Therefore, you must first determine the breed and breed composition appropriate for your herd and use index values to compare animals within that population.

Purebred Sires — AMERICAN SIMMENTAL ASSOCIATION Official Spring Sire Summary

Proven Sires

HOW TO READ THE SIRE SUMMARY

- Official registered name of bull.**
Bull's ASA registration number.
Karyotype Status:
KA = Karyotype Abnormal KN = Karyotype Normal
KE = Karyotype Exempt SD = Syndactyly Carrier
- Expected Progeny Difference (EPD).**
See definitions on previous page.
** Denotes genetic trait leader. Genetic Trait Leaders are designated for each trait. To qualify as a Genetic Trait Leader, a sire must rank among the top 10 percent of active Simmental sires for Expected Progeny Difference (EPD) and have an accuracy of 0.60 or higher.*
- DOB: Date of Birth (month/day/year).**
Horned/Polled Status:
H = horned P = polled
P/S = polled with scurs
Registration Status (Fullblood, purebred or percentage).
Bull's blood typing or DNA status with ASA:
BTF = blood type or DNA on file
PCS = parentage confirmed to sire only
PCD = parentage confirmed to dam only
PCB = parentage confirmed to both parents
- left number = Percentile Rank.** Indicates where a sire ranks in relation to EPD levels of the current population.
right number = Accuracy expressed in decimal.
- Name of bull's sire and maternal grandsire.**
Name and state of bull's current owner.
